PVE QEMU Event Daemon

Proxmox Server Solutions GmbH

<support@proxmox.com>
version 8.2.2, Thu Apr 25 09:24:16 CEST 2024

`qmeventd` is a daemon that listens on PATH for incoming connections from a qemu qmp socket, and waits for SHUTDOWN events. When a client then disconnects, it executes `/usr/sbin/qm cleanup`. This makes it easy to clean up leftover tap devices, vgpus, etc.
